DETAILED ACTION

The following is an examiner's statement of reasons for allowance:

Claim 1 is allowable over the prior art of record because the teachings of the references taken as a whole do not show or render obvious the combination set forth, including: (1) an apparatus for the on-line sorting of waste according to its chemical composition and directing said waste into one of the two or more channels according to predetermined criterion prior to the introduction of said waste into a waste processing plant or apparatus wherein said apparatus comprises: a loading unit, a weighing unit, a detector module, a diverter gate, a controller, and wherein said detector module comprises: a neutron moderator casing, made from a suitable hydrogenous material, said casing having an upper and a lower opening that can be selectively opened or sealed by doors; an inner chamber whose shape and dimensions are defined by the inner walls of said casing and said upper and lower openings; a suitable neutron generator for emitting neutrons to irradiate a batch of waste in said inner chamber; and a suitable spectrometric gamma detector for detecting gamma quanta; wherein, said emitted neutrons interact with different nuclei within said material thus producing excited nuclei, said excited nuclei decay emitting gamma quanta of different energies that are characteristic of said nuclei, and said detector detects

Art Unit: 3653

said gamma quanta emitted by said nuclei and measures their intensity as a function of their energy

Claim 19 is allowable over the prior art of record because the teachings of the references taken as a whole do not show or render obvious the combination set forth, including: (1) a system for processing waste said system comprising an apparatus for the on-line sorting of waste according to its chemical composition and directing said waste into one of the two or more channels according to predetermined criterion prior to the introduction of said waste into a waste processing plant or apparatus wherein said apparatus comprises: a loading unit, a weighing unit, a detector module, a diverter gate, a controller; wherein said waste is not presorted prior to entering said loading unit; said detector module comprises elements for performing a neutron activation analysis technique to determine the presence and amount of said one or more specified chemical elements in said batch; that the results of said determination is used to decide into which said channels said batch is to be directed; and said predetermined criteria, is whether the amount of said specified chemical is less than or greater than a predetermined threshold value and said system further comprising a waste processing plant or apparatus, a waste receiving bin, a suitable transport system for transporting waste from said bin to said sorting apparatus and from said sorting apparatus to said waste processing plant or apparatus or to some other location.

Art Unit: 3653

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
